THAT'S ENTERTAINMENT

Volume 11, Issue 1 April 2006

April 2006 Show

We hope this April Show finds you all having a great time out in the field. We have definitely had a GREAT time putting this one together for you. From the re-creation of the "Chuck E. Shuffle" to the groovy Earth, Wind, and Fire tune "Getaway," you're bound to be singing and dancing along with Chuck E. and the gang.

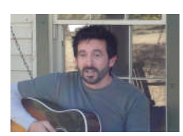

I want you all to be aware that we have changed the way that we are doing our show soundtracks. Great care and diligence are being invested to make sure that your show sounds spectacular. In addition, we are making certain that the audio levels are equal from segment to segment. What we are actively pursuing is the elimination of drastic level changes in audio volume. This way, you're not sprinting over to the Manager Control Panel to turn the show down for one segment…and then turning it back up for another. Granted, the live shows should always have a bit more 'kick' when it comes to volume. I mean, after all, this is when our STAR comes out to do his thing…LIVE! It should be louder for Mr. Cheese! However, you should find that the current show levels can be set at a good, strong level and left alone.

The other day, I was at casual dining restaurant with a friend. As soon as we came in the door, something seemed different. I couldn't put my finger on it…but something was not right. We were led to our table and left to wait for our server. We were sitting there, and it just seemed empty and dead in this place, even though there were a number of folks there for lunch. That's when it hit me…there's NO MUSIC in the house! And with that…no ENERGY. After speaking with our server, the music came up, and with it, the usual energetic atmosphere.

Music is a powerful thing. It definitely changes the atmosphere of a place drastically. The same principles of that casual dining restaurant apply to our Chuck E. Cheese's restaurants. No Music = No Energy. So, please take a moment once you've installed the new April Show and have it running, to walk around your location and simply listen. Is the level loud enough to lift the energy level of the store? Can you hear it strongly in the showroom? Can you hear it in the game room? It should fill the air and set the tone of the restaurant. If you don't hear good audio levels in your store, simply turn up the show in the Manager Control Panel. If you hear good audio in your showroom, but not in your game room, your game room amplifier needs to be turned up. Please follow your manual or call tech support to get your audio level up to a good level in the game room.

One more thought: we appreciate each and every one of you. You are the physical entertainers in each of our locations. You are the MAGIC. Have fun with the tools you're given. We know that on any given day you'll hear the show soundtrack numerous times. However, our guests have not. Let's keep the levels strong and entertain our guests with an energetic atmosphere. Thanks!

Robert Gotcher
